

# HHP-FS

This is a dedicated punching tool that makes it possible to install oil seals in the outer tubes (bottom cases) of front forks, easily and accurately. The inner surfaces of the various parts have vinyl chloride affixed to them, so there is no need to worry about the inner tubes being scratched or damaged.

A flexible chuck is used to allow the diameter of the inner tube (the seal diameter) to be adjusted freely between 21 and 44, simply by turning the chuck.
